

DAU PWA - Validation Guidelines v1.0

Purpose

The purpose of validation is to ensure that every markdown file accurately represents the original university webpage and follows the DAU PWA Markdown Standard.

Validation is a mandatory step before any file can be merged into the repository.

Validation Workflow

Page Assigned ↓ Markdown Created ↓ Validation ↓ Corrections (if needed) ↓ Approval ↓ GitHub Pull Request ↓ Merge

Validation Roles

Team Member

Responsible for:

- Scraping assigned pages
- Creating markdown files
- Following markdown standards

Validator

Responsible for:

- Reviewing another team member's work
- Checking completeness and accuracy
- Identifying formatting issues

Team Lead

Responsible for:

- Final approval
 - Reviewing validation reports
 - Submitting Pull Requests
-

Important Rule

A person CANNOT validate their own markdown file.

Example:

Member A → Scrapes

Member B → Validates

Team Lead → Approves

Validation Level 1 - Metadata Validation

Check that the markdown file contains:

title: url: category: scraped_by: scraped_date: team:

Verify:

✓ Title matches source page

✓ URL is correct

✓ Category is correct

✓ Scraper information is present

✓ Team information is present

Validation Level 2 - Structure Validation

Check that the markdown follows:

Overview

Main Content

Important Information

Related Links

Verify:

- ✓ All required sections exist
 - ✓ Heading hierarchy is preserved
 - ✓ Markdown formatting is correct
 - ✓ File naming convention is followed
-

Validation Level 3 - Content Validation

Open the original webpage.

Compare:

Original Page vs Markdown File

Verify:

- ✓ Main content is present
 - ✓ Important paragraphs are present
 - ✓ Important deadlines are preserved
 - ✓ Contact information is preserved
 - ✓ Important policies are preserved
 - ✓ No important sections are missing
-

Validation Level 4 - Table Validation

If the original page contains tables:

Verify:

- ✓ Tables are preserved
- ✓ Rows are not missing
- ✓ Columns are not missing
- ✓ Table formatting is readable

Example:

Original:

| Course | Credits |

Markdown:

| Course | Credits |

Must match.

Validation Level 5 - Link Validation

Verify:

- ✓ Important links are preserved
- ✓ PDF links are preserved
- ✓ Department links are preserved
- ✓ Contact links are preserved

Verify that links are not accidentally removed.

Validation Level 6 - Noise Removal Validation

Verify that the following are NOT present:

- ✗ Navigation bars
- ✗ Footer menus
- ✗ Social media widgets
- ✗ Search bars
- ✗ Repeated sidebar content
- ✗ Irrelevant UI elements

Only meaningful university content should remain.

Validation Level 7 - Coverage Validation

Use the automated scrape dataset as a reference.

Compare:

Automated Scrape vs Markdown Output

Check:

- ✓ Major sections exist
- ✓ Major headings exist
- ✓ No large blocks of content are missing
- ✓ No major links are missing

The automated scrape is used for verification only.

The markdown file remains the source of truth.

Validation Checklist

Before approval, verify:

Check	Pass/Fail
Metadata Present	
Correct Title	
Correct URL	
Correct Category	
Headings Preserved	
Main Content Present	
Tables Preserved	
Important Links Preserved	
Contact Information Preserved	
No Navbar/Footer	
Markdown Standard Followed	
Coverage Verified	

Validation Report Format

Every team should maintain:

validation_report.md

Example:

Team 3 Validation Report

Files Reviewed: 107

Passed: 101

Needs Changes: 6

Common Issues:

- Missing PDF links
- Missing table formatting
- Incorrect categories

Validation Date:

Validator:

Approval Criteria

A markdown file is approved only when:

- ✓ Metadata is complete
 - ✓ Content matches source page
 - ✓ Formatting follows standard
 - ✓ Validation checklist passes
 - ✓ Team Lead approves
-

Escalation Process

If a validator finds:

- Broken source pages
- Missing content
- Ambiguous information
- Large extraction failures

The issue should be reported to the Team Lead immediately.

Team Leads should escalate unresolved issues to the Project Lead.

Project Lead Audit

The Project Lead will perform random audits across all teams.

Audit Focus:

- ✓ Quality consistency
- ✓ Missing information
- ✓ Formatting compliance
- ✓ Validation integrity

Teams repeatedly failing audits may be asked to rework submissions.

Definition of Done

A markdown file is considered complete only when:

- ✓ Scraped
- ✓ Converted to markdown
- ✓ Validated
- ✓ Approved by Team Lead
- ✓ Submitted via Pull Request
- ✓ Merged into repository

Only then is the page considered part of the official DAU PWA Knowledge Base.
